

Appendix 7. Peri-urban aquatic food production around Hanoi

Peri-urban aquaculture in Hanoi

Pham Anh Tuan
 Research Institute for Aquaculture No.1
 TuSon, BacNinh

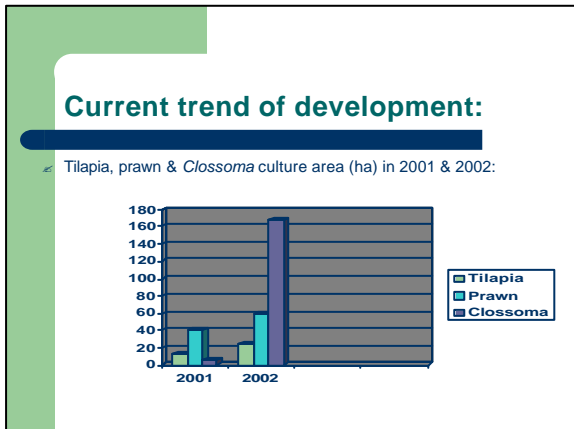

Current trend of development:

- ∞ Distribution of water area:
 - Filling ponds for housing, plants in city & close city region
 - Less sewage-fed ponds in Thanh tri
 - More ponds (2000 ha) built in rain-fed, lowland rice fields (Gialam, Soc Son, Tu Liem)

Current trend of development:

- ∞ **Species cultured:**
 - Chinese carps (GC, SC, BH, CC)
 - Indian Carps (RH, MG)
 - Tilapia
 - Hybrid catfish
 - Freshwater prawn
 - *Clossoma branchypomum*

Current trend of development:

- ∞ Higher risk of sewage used for fish culture
- ∞ More polluted village ponds
- ∞ Consumers need: quality fish
- ∞ More intensification and feedings

Appendix 7. Peri-urban aquatic food production around Hanoi

Current trend of development:

Average yield (kg/ha) during 1999-2002:
